

## **BASIC FIRE PREVENTION**

- Make sure you know the location of a fire extinguisher nearest to your work area
- Ensure any firefighting equipment kept in vehicles and trailers is inspected periodically, is maintained and in good operating condition
- Ensure all fire exits are free and clear, well lit and easily accessible
- Keep work area clean from debris and ensure waste materials are placed in proper disposal containers

In case of a fire:

- Warn others – yell for help if necessary
- Use fire extinguishers if the fire is small
- If the fire is (or could become) too large to control, call 9-1-1 after you exit the building
- In the case of an electrical, propane or gas fire, the first step is to shut off the supply if possible
